

THE VALUE ATTACHED TO SECURITY IN AN ORGANIZATION

Ayoola Ozioma,

Federal Republic of Nigeria

The main of the thesis is to provide as insights on security and protection of people and how their safety is a priority to the organization they are affiliate to, and how the security system is been operated And renovated by the people and the world in general as it is needed all around the world now.

CCTV relies on strategic placement of cameras, and observation of the camera's input on monitors somewhere. Because the cameras communicate with monitors and/or video recorders across private coaxial cable runs or wireless communication links, they gain the designation "closed-circuit" to indicate that access to their content is limited by design only to those able to see it [2].

What to look for when getting a CCTV camera, the number one thing you want to find is the size, because you tend to know how much space you have and how big a picture you want especially when slicing images from several cameras in the same screen to save the space, another thing you look out for is the resolution this helps in getting to know how much details you need to see and the quality of picture and it can make the difference if you need to identify an intruder or catch a license plate number so I can simply say with resolution you can get a better and brighter picture another thing we look out for is a colour vs monochrome this can be useful as a colour monitor and it identifies the burglars cloths for example and it doesn't operate as a black and white monitor that only picks the images, but it also affects the environment if the camera is in a low light area and its probably night then you can see that the black and white as more advantage. And the price is also very essential because when you know how much you will spend and if you are ready to bring out a huge amount of money then you will be able to get a colour monitor and additional features because your amount determines your quality, and lastly another thing you should be looking for is the viewers vision and considerations if the they light sensitve4 and extreme or near sightedness so you

Importance of CCTV security systems in business: Prevent Employee Theft - we see that with the help of the cctv security system we can have a reduction of employee theft because the employees will do well to stay on their best behaviour's during working hours and their will not be much lost in the company. Prevent Crime it also helps to prevent crime because people will be conscious to the camera because they know is recording and no one wants to go to prison so I will

not say it can totally prevent crime but it can reduce it. Help law enforcement – it's a great deal of help as evidence because when crimes take place the court can only work with a witness or an evidence so the CCTV can stand as a witness to any crime case done around the vicinity of the camera angle, Be a useful piece of evidence. Protecting your staff – in this case it can also be a protection tool or the employees to know that they are in safe hands and that they can work with peace of mind and also encourages good behaviour at organization. Keeping an eye on things – it helps the managers to also keep an eye on the staff and know what is going on in their organization, this is mostly for managers who can't trust their employees. Increase customers confidence – just like the staffs feels safe at work it is equally important to make the customers feel safe and this can increase the size of customers the organization as yearly, one of the thing have studied the people of the world like is to be ensured that they are safe and that their country is safe, their money is safe and their family is safe, they just want and crave for safety.

Now we want to look at the pros of the CCTV security system in an organization [1]: Deter Crime - This is the biggest and the most obvious benefit of installing security cameras. Once they are placed, you will be able to see their effect on people almost immediately. Monitor Scenarios and Activities - It is extremely easy to work with security camera systems as they can be placed anywhere as long as there is a power source close by. They come in all shapes and sizes. Gather evidence-Having cameras installed in strategic places comes in handy when you need to monitor actions and words of people or during an event. Arrive at the Right Decisions - Footage from security cameras can help you make correct and fair decisions when settling disputes, both in domestic as well as professional scenarios. Maintain Records - So you got to know of something that happened outside your home or office about a fortnight ago and curiosity is getting the better of you? You can douse it by simply looking up your security records. Cons of a CCTV security system in an organization. Privacy Is an Issue - there have been a few instances in the past where security cameras have stirred up controversies, especially in professional setups. It can be a costly affair - While dummy cameras may not be expensive, the real ones costs hundreds, even thousands of dollars depending on the features and the number of cameras and monitoring systems you buy. They can be Vulnerable - When we, as users of security cameras, try to keep ourselves updated on the latest in security systems, we should not forget that intruders and criminals are doing the same too. Cameras enable users to record footage for later viewing, and to help nab criminals, and receive justice from the law. They cannot, however, stop a crime when it is in progress.

Before making the important decision of installing security camera systems, it is better to be equipped with complete knowledge about them, as that will enable you to make an informed decision and help you choose a camera that fulfils your needs and expectations. Once you've

weighed the pros and cons of setting up this technological marvel, you will feel better about your choice [1].
